

# SIP Trunking

from NTT Communications

**Global ICT Partner**  
Innovative. Reliable. Seamless.

# Make the most of your network investment by making international calls over an IP connection

Use Arcstar Session Initiation Protocol Trunking (Arcstar SIP Trunking) instead of a traditional phone line to reduce your costs for overseas communications

## GLOBAL BUSINESS EXPANSION

In the midst of globalisation, enterprise customers increasingly need to effectively communicate with business partners in geographically dispersed locations around the world. A major concern for enterprise customers is the ever increasing telephone and mobile call expenses as well as the complexity in managing multiple contracts and vendors who supply breakout services to the PSTN network. Arcstar SIP Trunking solves this issue by reducing the need for enterprises to retain expensive PSTN line rentals, reducing complexity by centralising inbound and outbound calls to the PSTN network with a single contract and with competitive call rates.

Arcstar SIP Trunking offers a stable, high quality outbound / inbound calling service to various countries around the world at a competitive rate. You get a high quality voice experience at a reasonable cost. Arcstar SIP Trunking accelerates global communications and provides support for business expansion. Additionally, operation and maintenance cost / workload can be reduced with the convergence of voice and data on your network.

## ARCSTAR SIP TRUNKING

Arcstar SIP Trunking is a high-quality, low-rate SIP gateway service. Arcstar SIP Trunking uses the NTT Arcstar IP-VPN Network to transport the customers calls

with Quality Of Service enabled end-to-end, ensuring the customers calling experience is kept to the highest quality.

Arcstar SIP Trunking enables customers to make international calls from Arcstar Universal One (secure MPLS-Based VPN) offices to the worldwide PSTN by connecting the customer's existing PBX and NTT communications' SIP gateway.

## ARCSTAR SIP TRUNKING FEATURES

### Outbound Call

NTT Communications provides outbound call routing to the PSTN from your private network.

### Inbound Call

NTT Communications provides inbound call routing from the PSTN and transports calls via IP to your private network.

### DDI Numbers

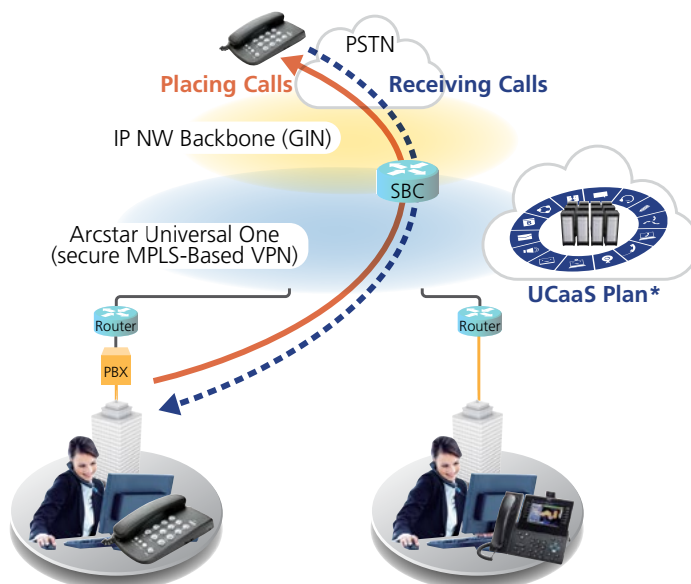

NTT Communications can provide DDI numbers and port DDI's to enable customers to retain their existing DDI numbers.

### Note:

Arcstar SIP Trunking (Outbound Call / Inbound Call / DDI Numbers) is provided where suitable facilities and coverage is available.

### Web-based CDR

NTT Communications provides the ability to review Call Detailed Records (CDR) on-line. Customers can download the CDR data as a CSV file and store or paste it into a separate document to analyze as required.

# Minimize the cost of international calling and take advantage of high quality global networks

By using Arcstar SIP Trunking from NTT Communications you can reduce the costs of calling overseas and improve productivity on a global scale

## KEY BUSINESS BENEFITS

Successfully reduce costs:

- Reduce international calling expenses
- Reduce cost of PSTN line rentals
- Reduce total cost of ownership by converging voice and data communication over Arcstar Universal One (secure MPLS-Based VPN)

Improve productivity on a global scale:

- Simplify operation and maintenance by consolidating your voice and data infrastructures to reduce complexity and management
- Effective collaboration across/outside the enterprise by using higher quality voice services at a lower cost

Support dynamic supply chain and accelerate business innovation:

- By bundling Arcstar SIP Trunking with Arcstar UCaaS, you can reduce call expenses with the added benefits of a unified communications experience including, on-net calling, presence and instant messaging, video/web conferences and many other features seamlessly integrated to speed up information sharing and decision making

## HOW THE SERVICE WORKS

Arcstar UCaaS will help when:

With the advance of globalization, the main issue that must be addressed is to minimize the cost of international calling. With Arcstar SIP Trunking, you can call any overseas clients or partners without worrying about the quality and costs.

Arcstar SIP Trunking will enhance your global communication.

Arcstar SIP Trunking can reduce total cost of ownership and save time of operating separate networks by combining voice and data communications over Arcstar Universal One (secure MPLS-Based VPN).

You need to reduce growing voice call expenses at your global organization. While Arcstar UCaaS will reduce internal call costs among global offices, Arcstar SIP Trunking will do so for external call costs to partners and / or clients worldwide. Arcstar UCaaS offers a unified communication environment together with high quality networks on a global scale, and will enhance global collaboration.

## WHY NTT COMMUNICATIONS ARCSTAR SIP TRUNKING?

### Secured and Reliable Platform Architecture

The network and equipment are configured redundantly to avoid single point of failure. Arcstar SIP Trunking service platform is monitored 24 hours a day, 365 days a year.

### High service quality

Arcstar SIP Trunking has Service Level Objective with regard to service availability. In addition to this Arcstar SIP Trunking is provided over a highly reliable and secure global IP-VPN services network ensuring a high standard level of service.

### Global support

NTT Communications overseas affiliates, which are familiar with the local ICT environments, can support the global expansion of your business.
